

Acceptance Checklist

Group name / number: _____ Section: _____

GitHub repository URL: _____

Evaluation date: _____ Instructor: _____

Requirement	Pass	Fail
Application successfully runs	☐	☐
Touchscreen-oriented UI is used	☐	☐
Large item buttons/cards are provided	☐	☐
At least six products are available	☐	☐
Product prices are displayed	☐	☐
Products can be selected by clicking/tapping	☐	☐
Quantity can be increased	☐	☐
Quantity can be decreased	☐	☐
An item can be removed	☐	☐
Item subtotal is correct	☐	☐
Total is calculated correctly	☐	☐
Order Summary is provided	☐	☐
User can go back and modify the order	☐	☐
At least three payment methods are available	☐	☐
Cash payment works	☐	☐
Insufficient Cash payment is rejected	☐	☐
Change is calculated correctly	☐	☐
QR payment can be simulated	☐	☐
Card payment can be simulated	☐	☐
Payment Successful screen is shown	☐	☐
A unique transaction reference is provided	☐	☐
View Receipt works	☐	☐
Receipt contains correct transaction details	☐	☐
Receipt displays the correct payment method	☐	☐
New Transaction resets the application	☐	☐
Meaningful user feedback is provided	☐	☐

Instructor comments

Complete the group contribution register and development-process checklist on the following pages. Apply the separately issued rubric when assigning scores.

Group Repository and Member Contributions

Use one shared group repository unless the examination instructions specify otherwise. Record the actual GitHub evidence for every member. Personal repositories are not required. Add copies of this page for additional members or branches.

Shared repository evidence

Group name / number: _____

Project title: _____

Repository URL: _____

Repository owner / organization: _____

Main / integration branch: _____ Final commit SHA: _____

Repository access verified by instructor: ☐ Yes ☐ No

Local clone demonstrated: ☐ Yes ☐ No

Branch list / network view URL or screenshot reference: _____

Member accounts and branches

Assign each member an ID (M1–M6) for the verification matrix on the next page. List each member's actual feature branch name(s), including branches already merged.

ID	Member name	GitHub username / profile URL	Feature branch name(s)
M1	_____	_____	_____
M2	_____	_____	_____
M3	_____	_____	_____
M4	_____	_____	_____
M5	_____	_____	_____
M6	_____	_____	_____

Contribution and pull request evidence

Enter actual identifiers or an evidence-document reference. Mark merged, open, or unmerged accurately; record who reviewed each pull request.

ID	Implemented feature / task	Commit SHA(s) / count	PR URL / number	Reviewer and merge status
M1	_____	_____	_____	_____
M2	_____	_____	_____	_____
M3	_____	_____	_____	_____
M4	_____	_____	_____	_____
M5	_____	_____	_____	_____
M6	_____	_____	_____	_____

If a feature branch was deleted after merge, verify its name and contribution through the merged pull request and commit history. Do not mark it missing solely because the branch was deleted.

Development Process Verification

Group Git / GitHub checklist

Evidence to verify	Pass	Fail
Shared repository exists; URL and instructor access are verified.	☐	☐
The repository is cloned and used for local development.	☐	☐
Project files are organized and tracked with Git.	☐	☐
At least seven real development stages are represented in commit history.	☐	☐
Commits cover setup, interface, core functionality, validation, bug fix, refactoring, and documentation.	☐	☐
Commit messages describe meaningful changes; history reflects actual development.	☐	☐
Member accounts, feature branches, and contributions are recorded.	☐	☐
Feature work is developed on branches and pushed to GitHub.	☐	☐
Pull requests identify the feature branch and target integration branch.	☐	☐
Review evidence exists before merge; requested changes are addressed.	☐	☐
Completed feature pull requests are merged into the integration branch.	☐	☐
The final demonstrated application matches the recorded integration commit.	☐	☐
README includes setup/run instructions, technology/storage choices, and group contributions.	☐	☐
AI prompts, responses, evaluations, and modifications are documented.	☐	☐

Individual member verification

Use the IDs from the member register. Enter P = verified, F = missing/incorrect, or N/A = not applicable under the assigned requirements. Add columns or a copy for larger groups.

Verify for each member	M1	M2	M3	M4	M5	M6
GitHub identity matches the recorded member.						
Feature branch and assigned work are identifiable.						
Meaningful authored commits are visible.						
Branch changes were pushed to the shared repository.						
PR ownership and feature changes are demonstrated.						
PR review and merge evidence are explained.						
AI generation, debugging, and refactoring evidence is identified.						
AI output is evaluated and adapted when necessary.						
Member explains their code and demonstrates their contribution.						

Verify authorship using commit details, PR records, and the member's explanation. Commit count alone does not prove contribution. Do not create artificial commits solely to meet the minimum history requirement.

Instructor notes / missing evidence: _____
